

Pelumi Adewara

Product Engineer — Software Engineer specialising in frontend, full-stack & mobile development

I design and build web & mobile products — from the first wireframe to the App Store.

Lagos, Nigeria · Padewara12@gmail.com · pelumi-adewara.vercel.app · github.com/Dave1604 · linkedin.com/in/pelumi-adewara

SUMMARY

Product Engineer with 5+ years of practice building production web and mobile applications across fintech, automotive, marketplaces, real estate, and education. Frontend specialist (React, Next.js, TypeScript) with growing backend ownership (Node.js, Express, PostgreSQL, Supabase). Ships real, live products used by real customers — including a WhatsApp-native fintech platform and a vehicle-documents backend serving several thousand car owners. Around 10 completed freelance client projects alongside startup roles.

EXPERIENCE

Full Stack Software Engineer · QwamPay Technologies

2025 – Present

*WhatsApp-native fintech for the Nigerian market · Lagos · [qwampay.com](#) **LIVE***

- Built the public marketing website, the complete admin portal frontend, and the support portal frontend for a payments platform, all live in production.
- Worked on the backend powering the WhatsApp-based payment platform and connected Meta WhatsApp Business message templates and workflows.
- Integrated backend APIs into frontend applications and built a library of reusable UI components, collaborating with backend engineers from startup stage.

Stack: React · TypeScript · Tailwind CSS · Node.js

Full Stack Software Engineer · Motoka

2025 – Present

*Vehicle-documents platform · [motoka.ng](#) **LIVE***

- Built the complete backend architecture for a platform serving several thousand car owners: authentication with 2FA, KYC flows, vehicle records, and payment workflows.
- Built an automatic document-expiry notification engine with a 9-point reminder schedule, plus guest renewal functionality and public REST APIs.
- Completely redesigned the admin dashboard, working directly with startup leadership to ship product features.

Stack: Node.js · Express · PostgreSQL · Supabase · REST

Frontend Developer · AutoCredit Technologies (MoniCredit)

2024 – 2025

- Developed and maintained frontend features for the MoniCredit lending platform in production; built responsive interfaces and improved UX in collaboration with backend developers.

Frontend Developer & Tutor · Tech Talent Academy

2021 – 2023

- Taught frontend web development, mentored beginner developers, reviewed student projects, and built frontend applications alongside teaching duties.

Frontend Developer Intern · CodeSquad LLC

2020 – 2021

- Built responsive web interfaces alongside experienced developers using Git and collaborative team workflows.

Freelance Product Engineer · ~10 completed client projects

2021 – Present

- **Truekey Realty** — real-estate listings site for homes across Ikoyi–Sangotedo, Lagos ([truekeyrealty.homes](#)). **LIVE**
- **Who's Cuh?** — food-delivery platform and brand site (Ijebu-Ode & Ijagun): ordering, restaurant onboarding, payment and delivery workflow. **LIVE**
- Further client work: car-dealership website, museum website with lighting-concept branding, real-estate platform with interactive maps — owning requirements gathering, client meetings, revisions, and delivery end to end.

SELECTED PROJECTS

Ronsho — Nigerian bespoke-fashion marketplace connecting customers with tailors and fabric sellers; built solo, full-stack. **Stack:** React, TypeScript, Vite, Tailwind, Node.js, Supabase

Study Buddy — e-learning platform built as final-year dissertation at Arden University; features grounded in e-learning research (in-lesson quizzes, progress tracking, lesson-duration metadata). **Stack:** React, Node.js, Express, MongoDB

SMART Banking credit-score model — Python regression models for credit-score prediction with model evaluation and an executive report.

SKILLS

Interface: React, Next.js, TypeScript, JavaScript, Tailwind CSS, Framer Motion, HTML5, CSS3, component architecture, state management

Mobile: React Native, cross-platform delivery

Backend: Node.js, Express, REST API design, authentication (2FA, KYC), authorization, payment integration

Databases: PostgreSQL, Supabase, MongoDB

AI-augmented engineering: advanced prompt engineering; LLM-assisted development across Claude, GPT, and agentic coding tools (Cursor, Claude Code); AI-driven planning, code review, and workflow design

Tools: Git, GitHub, Figma, design systems, wireframing, prototyping, Vercel

Practice: accessibility, performance budgets, technical writing · Python

EDUCATION

BSc (Hons) Computer Science · Arden University Expected Nov 2026

Final-year dissertation: Study Buddy e-learning platform. Coursework: Data Mining, Blockchain, Cybersecurity, Managing Innovation & Change.

Languages: English (fluent) · Japanese (learning)
